NEW RECORDS OF *PARAMEIRA SETOSA* SEIDLITZ, 1868 (COLEOPTERA: CURCULIONIDAE: ENTIMINAE) IN UKRAINE

Назаренко, В. Ю. Нові знахідки *Parameira setosa* Seidlitz, 1868 (Coleoptera: Curculionidae: Entiminae) в Україні. *Вісник Харківського ентомологічного товариства*. 2020. Т. XXVIII, вип. 2. С. 26–28. DOI: 10.36016/KhESG-2020-28-2-2.

Наведено відомості про першу знахідку *Parameira setosa* в Київській області. Раніше цей вид був відомий в Україні лише з Одеської та Сумської областей.

4 рис., 5 назв.

Ключові слова: Coleoptera, Curculionidae, Entiminae, *Parameira setosa*, жуки, довгоносики, Україна, Київська область, фауна.

The first record of *Parameira setosa* in Kyiv Region is published. The species was known formerly from Odesa and Sumy regions only.

4 figs., 5 refs.

Keywords: Coleoptera, Curculionidae, Entiminae, *Parameira setosa*, beetles, weevils, Ukraine, Kyiv Region, fauna.

Introduction. Weevils of the genus *Parameira* Seidlitz, 1868 are rare in collections and poorly known because of rare occurrence, hidden life cycle in soil or in plant debris, cryptic coloration and slowness of adults. *Parameira (Stierlinia) setosa* Seidlitz, 1868 has been recorded from Odesa and Sumy regions of Ukraine (Yunakov, 2004; Yunakov *et al.*, 2018) (Fig. 4, grey triangle).

Materials and methods. Six specimens of this species were picked by the author from ground (Figs 2, 3) in 2020 in Kyiv Region (Ukraine). The taxonomy accepted here is that in Alonso-Zarazaga *et al.* (2017). GPS coordinates were captured with smartphone ZTE Blade A7 using Geo-Tracker v. 4.0.2.1750 (25.08.2019) application for Android and GARMIN Etrex 32x. The photographs of preserved specimen (Fig. 1) were taken using Leica M165C microscope equipped with Leica DFC450C and in the field using Canon PowerShot A480 digital camera and ZTE Blade A7, then edited with GIMP v. 2.8.4 and Inkscape v. 0.48.4 r9939. Mapping was done using modified relief Ukraine map (<https://www.maps-of-the-world.ru/europe/ukraine/large-relief-map-of-ukraine>). Specimens are deposited in the I. I. Schmalhausen Institute of Zoology of the National Academy of Sciences of Ukraine (SIZK).

Results and discussion.

Family CURCULIONIDAE

Subfamily ENTIMINAE

Genus *Parameira* Seidlitz, 1868

Subgenus *Stierlinia* Desbrochers des Loges, 1909

Parameira (Stierlinia) setosa Seidlitz, 1868

Distribution. Bulgaria, Greece, Moldova, Romania, Turkey, Ukraine (Alonso-Zarazaga *et al.*, 2017). Records in Ukraine: Odesa Region: Viktorivka railway station; Serhiivka env.; Kotlovyna; Chervony Yar, near Kytai Lake; Sumy Region: Mykhailivska Tsilyna Nature Reserve (Yunakov *et al.*, 2018; Fig. 4, grey triangles); Kyiv Region (original data, Fig. 4, grey circle).

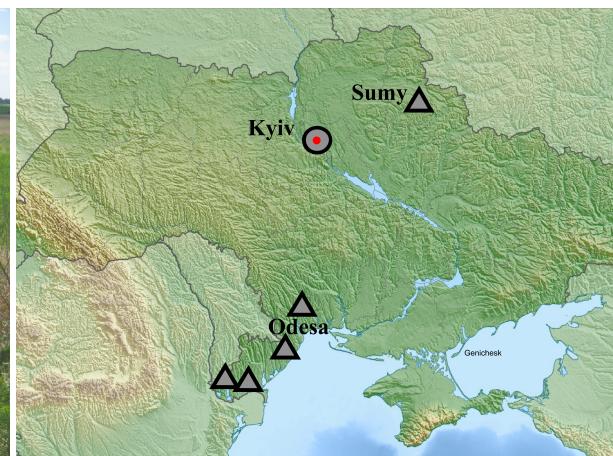

Fig. 4. Findings of *P. setosa* in Ukraine:
○ — exact position, △ — cited locations.

Ecology. On grassy slopes, steppes, in grass litter. Adults occur from April to November. Polyphagous (Yunakov, 2004; Yunakov *et al.*, 2018). It is supposed that adult *Parameira* weevils are feeding on the leaves or plant debris (Isaev *et al.*, 2004; Yunakov, 2004; Zabaluev, 2019). *In vitro* imago fed on leaves and especially

flowers of *Trifolium repens* L. This plant was not found in the discovered natural habitat of *P. setosa* and corresponding traces of feeding on surrounding plants were not observed here.

Remarks. The finding of specimens from Baryshivka environs partly is filling the gap between previous records in southern-western and northern-eastern parts of Ukraine (Yunakov, 2004; Yunakov *et al.*, 2018). It is possible that an accidental introduction of the species with sand occurred in ca. 2016–2018. It is also likely that *P. setosa* is more widespread in Ukraine without being noticed due to its very local distribution. A remarkable notice is that the species inhabits disturbed and regularly cultivated sites and mowed hayfields along sides of paved road (Fig. 3).
