CHECKLIST OF TORTRICID MOTHS (LEPIDOPTERA: TORTRICIDAE) OF LUHANSK REGION OF UKRAINE

Кавурка, В. В., Дем'яненко, С. О., Будашкін, Ю. І. Список листовійок (Lepidoptera: Tortricidae) Луганської області України. *Вісні Харківського ентомологічного товариства*. 2021. Т. XXIX, вип. 2. С. 10–30. DOI: 10.36016/KhESG-2021-29-2-2.

У статті наведено анотований список видів листовійок (Lepidoptera, Tortricidae), відомих з Луганської області. Список містить 221 вид, 75 з яких уперше вказуються для Луганської області, а один вид (*Dichrorampha klimeschiana* Toll, 1955) — вперше для фауни України.

14 рис., 23 назв.

Ключові слова: лусокрилі, листовійки, нові знахідки, фауна, Луганська область, Україна.

Keywords: Lepidoptera, Tortricidae, new records, fauna, Luhansk Region, Ukraine.

Introduction. Tortricid moths (Lepidoptera: Tortricidae), comprising more than 11,000 species in the world (Gilligan *et al.*, 2018) and over 580 species in Ukraine (estimate by V. Kavurka), is one of the most numerous and economically important families of Lepidoptera. Despite the fact that the European fauna of tortricid moths is relatively well-known (e.g., there is a monograph on tortricid moths of Europe (Razowski, 2002, 2003)), the territory of Europe is very unevenly studied, and Ukraine belongs to less studied regions. Publications on tortricid moths of most regions of Ukraine, including Luhansk Region, are very few and fragmentary. As a result, the fauna of tortricid moths of Luhansk Region known prior to this work (Medvedev, 1950; Bednyi, 1965; Belik, 1967, 1968; Kostjuk, 1980; Klechkovskiy, 2005; Kljuchko, 2007; Kavurka, 2010, 2015; Grytsenko *et al.*, 2011; Geryak, Demyanenko, Konovalov, 2013; Bidzilya *et al.*, 2014; Guglya, 2015; Demyanenko *et al.*, 2018) comprises 146 species.

Materials and methods. This paper is based on the material collected and observed mainly by S. O. Demyanenko (in this case the collector's name is not indicated in the checklist) and S. V. Konovalov in various places of Luhansk Region (mainly in environs of Severodonetsk). The material was observed and collected via daytime catching by a net, attracting by light (160 W and 250 W mercury arc lamps, in rare cases also incandescent lamps), and photographing. The determination of the material was carried out by the authors mainly by Kuznetsov (1978), Razowski (2002, 2003) and Lepiforum (2021). The determination by photographs was carried out for species with distinct differences in habitus only. In difficult cases, the determination was made by genitalia prepared by maceration in 8–12% NaOH solution. New species for Luhansk Region that were registered by photos only (i.e., the material was not collected) are presented on UkrBin (2021). Most of the collected material is preserved in the collection of I. I. Schmalhausen Institute of Zoology of the National Academy of Sciences of Ukraine (in these cases, the sex of the collected specimens is indicated in the list below). Single specimens are preserved in the collections of T. I. Vyazemsky Karadag Scientific Station — Nature Reserve (further in text KSS) and Institute for Evolutionary Ecology of the National Academy of Sciences of Ukraine (further in text IEEK).

D i s t r i b u t i o n. Europe (Apennine Peninsula, Sicily, S Ural Mountains), mountains of Kazakhstan and Magadan (Razowski, 2003; Sinev *et al.*, 2019).

R e m a r k s. Specimens were observed in the daytime at floodplain forest glades, in *Artemisia* cf. *pontica* thickets only.

C o n c l u s i o n s. According to the results of our research and the literature data, 221 species of tortricid moths are found in Luhansk Region, of which 75 are given for the first time. In comparison with some other regions with similar areas, *e.g.*, Crimea — 314 species (Budashkin, 2009), the number of recorded species for Luhansk Region is less, probably due to less research volume. Further studies will certainly supplement the checklist of tortricid moths of Luhansk Region with new species.

A c k n o w l e d g e m e n t s. The authors are sincerely grateful to O. V. Bidzilya for determination of some species, S. V. Glotov for providing material, and E. A. Karolinskiy for revision of English text and useful comments. Yu. I. Budashkin carried out his part of the work on this paper in the framework of the implementation of the State Task No. 121032300023-7.
